

Electronics for SeedPro Planters

Planter System Monitor Remote

The planter remote offers a second control system to operate and monitor functions of the planter.

- Manual switches to cycle SeedPro meters
- Population changes
- Air compressor power, air pressure
- Battery voltage
- Auxiliary power
- Bulk seeding control

Planter System Monitor

The planter's performance is easily setup and monitored from one TouchScreen computer monitor. The software is custom to ALMACO's clients and is Windows based for ease of use and understanding. Plot variables are entered into the system for quick setup and planter calibration. Planting Data is then monitored and recorded in real time. All setup changes can be made right on the computer in one easy system.

Planter System Monitor

- ALMACO's custom Windows based "smart" software allows the quick and user friendly planter setup
- Rugged, environmental friendly, touch screen hardware
- Inputs for plot length, alley length, seed spacing, seed count and planting speed
- Displays actual seed count and spacing per row
- Quick adjustment of seed counts and plot lengths allows for simple planters setup – no mechanical adjustments
- Adjustable settings for no seed alarms
- Multiple programmable populations for changing populations on-the-go
- Planting data storage and download
- VGA monitor outputs for display of info in the tractor

Easy to use Touch Screen
