

Planter Options

Excess Seed Evacuation Chamber

Centralized collection hopper for storage of excess plot seed. Excess seed is evacuated from the precision row unit and moved via air to the holding chamber for ease of disposal.

On-board Air Compressor

Supports the functions of air operated actuators on seed dividers and metering units. Also allows for daily cleaning of the planter via air wand.

Single Vacuum Blower

New and improved high powered vacuum blower for up to 8 rows. Allows the use of a single vacuum system on the planter for less noise and greater dependability.

Custom Drip Tape Installation

Addition of drip tape irrigation systems on planter for in-ground setting during planting.

Headset Communication

Communicate effortlessly with other planter operators and tractor driver via 2-way radio headsets. Available in wired or wireless systems.

Customization is our middle name...
