

## Technical Service Bulletin: Data Collection Systems

**Affected Equipment Line:** Combines/Harvesting Systems

**Affected Systems:** Seed Spector 2 (SS2), Seed Spector 5 (SS5), and LRX

Supply chain challenges have created difficulties in obtaining the necessary components to sell and repair our Seed Spector Harvest Data products. To support client uptime, the new ALMACO [D1 Data Collection Unit](#) is the replacement product providing precise yield data on the go and in real time. With exceptional durability and an intuitive user interface, D1 delivers the most accurate data for faster advancement decisions.

An upgrade from an LRX to a D1 requires no changes to weight systems, load cells, or moisture blades. While the LRX is no longer available as a new purchase, ALMACO will continue to service the LRX units through October 1, 2024 for a more seamless transition. Service parts and LRX loaner units are available on a first-come, first-served basis, while supplies last.

SS2 and SS5 products are no longer available to be purchased or serviced. In the event of a device failure, D1 is a simple, cost-effective replacement that will require a Vantage HD software update.
